HEADLINE: Compete for a position with the worldwide leaders in automotive safety!

The automotive industry is far from safe, but you can be part of the solution. If you are into the idea of making the industry safer or if you are looking for a challenge that will put your engineering skills to the test - you should check out the Development Engineer Position at Autoliv Challenge. The grand prize is a position as Development Engineer at the Brasov office in Romania. All you have to do to compete is answer three sets of multiple choice questions and fill in your profile form and you could be Autoliv's next Development Engineer! Three positions are available for the taking, for top performers. Second place winners will win an expenses-paid "How is it Made Experience" at Autoliv's office in Brasov, Romania. This will include a day to see how airbags and seatbelts are produced and tested by Autoliv engineers, along with a question and answer session with top Development Engineers at Autoliv.

Take the challenge and you could be part of the worldwide leaders in automotive safety.
